- calcification (local) of, after subcutaneous injection of irradiated ergosterol, 2759¹
- calcium and P₄₅₀ in, 1839⁶
- in cancer, glycolysis and respiration of, 5927¹
- carbohydrate metabolism in muscle, 994¹
- carbohydrate metabolism of normal and tumor, 598¹
- carbohydrate utilization by 2 clones of, 993¹
- carcinoma, metabolism of, 546¹¹
- catalase activity in, app. for measurement of, 719¹
- chloride content of, after drying, 4607¹
- chloride mobilization in by novarsol effect on gastric secretion, 1277¹
- chlorine compounds (org.) in, 5697¹
- chlorine of chloropnea with excess of in cirrhosis of liver, 1372¹
- chloroform content of in anesthena, 1910¹
- cholesterol content of effect of endocrine axis on, 3083¹
- cholesterol detn. in, 4903¹
- cholesterol metabolism of, 3460¹
- coagulation (reversible) in, 2468, 3334, 4928¹
- colloidal structure of fluid of in pregnancy with albuminuria and with eclampsia, 5699¹
- compn. of, 999¹
- compn. of under influence of superficial burn, 3044¹
- Congo red effect in cultures of normal and neoplastic, 5214¹
- culture media for, acidification of, 1846¹
- culture of in hanging drops, 1852¹
- culture (quant.) of, 2452¹
- cultures of and their physiol. behavior, 1342¹
- cytotoxic action of tuberculin in culture of, 5689¹
- delayed lethal effect of Ra on, 4619¹
- denervated, chloride content of blood from, 5461¹
- dental lipin content of in relation to decay, 2709¹
- development and phosphatase activity of mandibular skeletal of embryonic fowl, 3040¹
- diamine acid content of muscle, 1912¹
- effect of Na piccolate and other foreign substances on subcutaneous, 3747¹
- effect on oxidation of adrenaline, 5440¹
- effects of en and pseudo-globulin fractions of antineoplastic sera on cultures of, 3723¹
- electrolyte exchange between blood and under influence of sp. diuretics, 331¹
- electrometry of macroelectrodes for, 5908¹
- electric emissions (secondary) from, 571¹
- electrostatic charge of effect of drugs on, 4823¹
- elements in, 3166¹, 4593¹
- embryonic cardiac, effects of adrenaline and of acetylcholine on, 4063¹
- enzyme action in, in relation to sex, 4593¹
- iron fixation in, 733¹
- exchange of substances between blood and effect of urea injection on, 3073¹
- axis depressor substance in, 3440¹
- axis differentiation of in *in vivo* and *in vitro* actions of, 342¹
- effect of mixts. of blood sera and on coagulation of blood, 4309¹
- effect on blood area, 319¹
- fat destruction in, 1558¹
- fatty acids and unsaponifiable substances in, 4003¹
- fibrinogen of and blood clotting by it effect of urea on, 4060¹
- fibrinogen production by, 4042¹
- fluids of vascular effect of, 1584¹
- freezing of living, 8199¹
- gas tensions in, 1363¹
- germanium dioxide effect on, 4063¹
- glycolysis and increase in acidity in cultures of, 1882¹
- glycolytic power of cancerous, 993¹
- glucose distribution in, 3368¹
- glutathione content in normal and pathol., 1682¹
- glutathione content of effect of diet rich in cystine on, 3379¹
- glutathione in, 5199¹
- glyoxalase prepn. from, 125¹
- growth of cultures of, 5434¹
- growth of effect of hormone of anterior lobe of hypophysis on, 2763¹
- effect of malachite green and its derivs. on, 4044¹
- effect of x rays on, 2449¹
- growth of explanted effect of thyroxine on, 449¹
- growth of normal and malignant effect of variations in media on, 2153¹
- heart-stimulant substances extd. from muscular P, 1378¹
- hemopoietic effect of lig. salts on, 5923¹
- hemopoietic relation between fixation of colloidal Cu's in reticulo endothelial app. and its action on, 107¹
- hydrogen ion concn. of detn. of, 4292¹
- hydrogen ion concn. of hanging drop cultures of adjustment of, 5683¹
- hydrogen ion concn. of in diabetes in *apudus*, 135¹
- hydrogen ion concn. of tumor and normal in *Rous sarcoma*, 341¹
- hydrophilia of in relation to thyroid gland, 4039¹
- inflamed ppts. of colloidal Ag in, 347¹
- inhibiting power of plasma from old animals on cultures of, 2786¹
- insulin effect on cultures of, 1585¹
- iodine detection in, 1689¹
- iodine storage in, 1689¹
- iron accumulation in tuberculous, 3724¹
- iron in exs. and detn. of, 2164¹
- iron in *in pueris* anemia and malignant growths, 1573¹
- iron in normal and pathol. and its biol. significance, 1890¹, 5702¹
- kidney Nils. production by, 731¹
- kidney effect of vitamins B₁ and B₆ on changes in due to protein rich diet, 4030¹
- lactic acid and Ca distribution in cultures of, 4600¹
- lactic acid fermentation in, in relation to sugar fermentation in liver, 4033¹
- lactic acid fermentation of, 529¹
- lesions of periodontal in relation to impaired renal function, 4312¹
- lipase content of adipose and lipomatous, 4311¹
- lung, in pneumococcus, 2479¹
- magnesium detn. in, 4031¹
- male gonad effect on spawning movement of adductor muscle of oyster, 543¹

III. FORMULA INDEX

KEY

In using this index the following should be borne in mind

1 The Formula Index is supplementary to the Subject Index, in no sense does it replace any part of the latter. Unnamed, incompletely described compounds can often be given specific entry in the Formula Index only

2 Inorganic as well as organic compounds have been entered

3 Entries under their own formulas are made for all strictly inorganic and strictly organic compounds and for the true organic derivatives of organic compounds, both addition compounds and true reaction derivatives (this includes esters, hydrazones, methohalides, oximes, picrates, semicarbazones, etc.) Inorganic salts of organic acids and inorganic addition compounds of organic compounds (hydrohalides, chloroplatinates, perchlorates, sulfates, etc.) are not given separate entries but are indicated in modifying phrases under the formulas of the compounds from which they are derived (under the acid in the case of a salt). Salts of formic, acetic and oxalic acids are exceptions, these are entered as such

4. The arrangement of symbols in formulas is alphabetical except that in carbon compounds C always comes first, followed immediately by H if hydrogen is also present

5 The arrangement of formulas is also alphabetical except that the number of atoms of any specific kind influences the order of compounds e g., all formulas with 1 C come before those with C₂, thus CCl₃O, CCl₄, CHCl₃, CHN, CHNO, CH₂Br, CH₂O, CH₂Cl, CO, C₂Ca, C₂H₂O₂

6 The arrangement of entries under any heading is strictly alphabetical according to the preferred names of the isomers

7. Entries consist of (a) the formula (in bold-face type), (b) the name as it has been entered in the Subject Index (in light-face Roman type; *it should be noted particularly that the part of the entry in this type is the exact equivalent of the formula given*), (c) occasionally a modifying phrase or word such as "Ca salt" or "hydrochloride" (in italics, different type being used to set off that part of a compound being indexed which is not represented in the formula used, see ¶ 3 above), (d) the page reference and (e) the fraction of the page in ninths (indicated by a small superior numeral) in which the compound will be found

8 Cross-references are to the Subject Index

9 Water of hydration is not made a part of the formulas indexed but is usually given in light-face type following the formulas

10 Polymers having different names and recognized as different substances, e g, acetaldehyde and paraldehyde, are all entered under their accepted formulas. But definite compounds for which different polymeric formulas are in use are entered under the simplest formula only with cross references under the polymeric formulas

11 A straight line, thus —, used under some headings to avoid repetition of names, always stands for the name of the 'index compound,' i e, that part of the preceding name (inverted) which comes before the comma

12 'P' before a page number indicates that the abstract is of a patent.

13 The names beryllium (Be), columbium (Cb), hafnium (Hf) and illinium (Il) are given preference over glucinum (Gl), niobium (Nb), celtium (Ct) and florentium (Fr), respectively, for these elements

The Key to a formula index is necessarily lengthy. It would not be correct to conclude from this that this index is difficult to use. Experience is to the contrary.

INTRODUCTION

General purpose and policy The location of chemical compounds in an index by names is at times uncertain because names vary and in the case of complex compounds may be difficult to ascertain. New compounds are constantly being prepared, which, if named at all, may receive more than one name which is justified from one point of view or another and the possibilities of incorrect names are great. Since the kinds and number of component atoms of a chemical compound are unvarying characteristics the supplementary Formula Index to *Chemical Abstracts* is published for the purpose of eliminating this element of uncertainty in the Subject Index. Except that unnamed compounds are no longer entered under the heading 'Compound,' the Subject Index is in no way altered on account of the Formula Index. In the Subject Index related compounds are *grouped* rather effectively and to good use by the present system of indexing on the basis of 'parent compounds' or more accurately 'index compounds', in the Formula Index the certain location of *individual* compounds is the primary consideration. The Subject Index is more convenient to use in some respects and it frequently contains more information in the form of modifying phrases. The repetition of modifying phrases in the Formula Index beyond necessary brief phrases to indicate derivatives has been avoided as unnecessary for the accomplishment of the real purpose of this index, as stated above, and as inconsistent with necessary economy. Isomerism is not indicated in the Formula Index in cases in which the names differ only in position numbers or letters, but it always is in the Subject Index when known. Ready reference to the Subject Index for the purpose of locating information regarding related compounds is made possible by the use in the Formula Index of names following the formulas written exactly as they appear in the former index.

All new compounds and all compounds for which new data are given have been entered. Most of the compounds have been entered under their own formulas. Some departure from a policy of making separate formula entries for derivatives of all kinds is
